**Portfolio:** https://tejaswi-portfolio-react.vercel.app/

## TECHNICAL SUMMARY

- **Software Engineer** with 3 years of experience, delivering end-to-end features from responsive React UIs to RESTful APIs.
- **Front-end:** React, JavaScript (ES6), TypeScript, HTML5/CSS3, Styled Components, responsive and accessible UIs.
- **Back-end & data**: Node.js/Express, SQL (PostgreSQL, SQLite).

## EDUCATION

**Master of Science in Information Sciences** **Aug 2025**
Trine University, Pheonix, AZ GPA: 3.8/4.0

**Bachelor of Science in Information Technology** **July 2021**
Osmania University, Hyderabad, India

## CORE STRENGTHS

- HTML5 & CSS3
- Python, Git & GitHub
- JavaScript (ES6), TypeScript
- PostgreSQL, MongoDB & SQLite
- React.js & Next.js
- Node.js & Express.js

## EXPERIENCE

**Software Engineer – HPC Consulting Pvt Ltd, Gurgaon, India** **Sep 2020 – Aug 2023**

- Developed scalable full-stack web applications using React, Next.js, JavaScript, TypeScript, Node.js, and Express, contributing across both frontend interfaces and backend services.
- Built reusable UI components such as filters, loaders, pagination, and error states, improving consistency, maintainability, and overall development efficiency.
- Integrated REST APIs to power dynamic user experiences, with robust handling for loading, empty, and failure states to improve reliability and usability.
- Collaborated with designers, backend engineers, and product stakeholders in an Agile/Scrum environment (standups, sprint planning, reviews) to deliver features and UI improvements on time.
- Implemented responsive, mobile-first layouts using HTML, CSS, Bootstrap, and CSS-in-JS, ensuring smooth performance across desktop and mobile devices with basic accessibility support.
- Built backend APIs using Node.js and Express for an online tools platform, supporting the full flow of uploading a file → converting it → downloading the result.
- Connected the backend to third-party conversion APIs (PDF/doc/image) and handled real cases like async processing, input validation, timeouts, retries, and clear error messages when conversions fail.
- Made file handling safer by adding file type/size checks, generating unique job IDs, and automatically cleaning up temporary files after conversion to manage storage.
- Improved reliability with basic production practices like rate limiting, structured logging, and common error-handling middleware to make debugging easier.
- Applied strong knowledge of data structures, algorithms, and software engineering fundamentals to write efficient, maintainable, and scalable code across full-stack projects.

## PROJECTS

- Built a personal e-commerce web application using React, integrating product data from APIs and implementing several features such as product listings, Cart functionality, and added user

methukutejaswi@gmail.com | +1 951 454 5299
Irvine, CA

authentication and authorization. I also used CSS modules and Bootstrap for styling purposes and developed a responsive, cross-browser UI with dynamic updates.

- Built a React-based Jobby App job portal with JWT authentication (login/logout) and protected routes, integrated REST APIs for job listings/details, implemented search + filters (employment type, salary range) with dynamic updates, handled loading/empty/error + retry states, and created reusable, responsive UI components using React Router, JavaScript, HTML, and CSS.
- Built a complete React Admin Dashboard using React, Material UI, and the MUI Data Grid for tables and data views. Implemented core dashboard pages and reusable UI components with clean, responsive layouts and added light and dark mode theming so users can switch styles easily.
- Built a full-stack AI image generator application using the MERN stack, where users can generate images from text prompts and share them through the platform. Developed backend APIs with Node.js and Express, stored post data in MongoDB, and integrated Cloudinary for image storage. Designed a responsive React frontend with prompt input, image preview, and post display functionality.
